

1. Example for Week2Day4Demo.StructDemo.TestStruct()

2. Differences between Classes and Struct

Category	Classes	Structs
Data Type	Reference Types - Heap	Value Types – Stack
Inheritance	Yes	No
Default Value	null	All fields would be zeroed
Constructor	Default constructor allowed	Default constructor not allowed and in other constructors, you must ensure all fields are set to some initial value
Destructors	Yes	No
Assignment	Copies values	Copies reference

3. There are two User Defined Value types – structures and enumeration

- struct
- enum
